FLEETRUN: FLEET MAINTENANCE SOLUTION

Fleetrun is a fleet maintenance software based on Wialon, the platform for GPS tracking and IoT.

Fleet owners use Fleetrun to monitor vehicle condition, control maintenance costs, and avoid vehicle or trailer breakdown and downtime.

Fleetrun functionality

All data in a single application
Use Fleetrun instead of paper logs and multi-page Excel documents to plan and monitor maintenance services.

Maintenance management
Register repairs for every vehicle: maintenance work to fulfill, parts to replace, total costs, and the time when the vehicle returns from the service station.

Maintenance scheduling
Set up service reminders and specify their frequency manually, or set up automatic maintenance notifications based on mileage intervals, engine hours, or time periods.

Cost reports
Keep all your repair orders and spare parts expenses in one app. Fleetrun will calculate the maintenance costs of each vehicle individually and the whole fleet in general.

Process digitalization
Save your employees' time and let Fleetrun automatically create services and send notifications about their status.
