

LEASECONTROL

GPS tracking software
for vehicle leasing: asset
safety and control

BENEFITS FOR BUSINESS

LeaseControl is a GPS tracking solution for covering safety challenges and protecting the assets of the companies operating in car financing, auto loans, vehicle leasing, high-risk auto deals, and BHPH (Buy Here Pay Here) dealerships.

Reliable software to track, secure, and control the assets, prevent theft and facilitate vehicle recovery.

The company's profits are protected, and the expenses typical for the industry are reduced.

The solution is powered by Wialon, the platform trusted by owners of 3.4 million vehicles around the world.

HOW LEASECONTROL WORKS

Explore the features for online tracking, remote control, and recovery of leased cars. Protect your profits from day one.

ALWAYS READY TO ACT

There's no need to sit in front of your screen and track vehicles non-stop. You can act straight away to secure them after getting notifications on suspicious actions.

THEFT PREVENTION

The driver acts suspiciously, e.g., stops in highly criminal places or leaves the allowed area? Simply block the engine remotely to save your vehicle from being stolen.

FACILITATING VEHICLE RECOVERY

There is no need to look for your vehicle, as its location is known. You can communicate the coordinates to the police to help them reach your asset quicker.

TIMELY PAYMENTS

Shut down the vehicle engine remotely in case the client delays payments and ignores your calls.

THE FULL PICTURE AT HAND

Get the location data and trace the route of your vehicles to see its movements before the alleged theft was detected.
